PRESS RELEASE

Superteam Germany and Solana Unveil Insights on the Future of Stablecoins

Berlin, Germany – April 1st, 2025 – Today, the Solana Foundation and Superteam Germany announced the launch of the highly anticipated 2025 Stablecoin Report. This comprehensive report outlines critical developments and the transformative potential of stablecoins, decentralized finance (DeFi), Web3, and AI for corporate finance across Europe. The report highlights how stablecoins are reshaping payments, fostering financial inclusion, and positioning Solana as a dominant force in the industry.

Key Highlights from the 2025 Stablecoin Report:

Stablecoins Become a Mainstream Financial Instrument
Stablecoins have surged beyond niche trading tools to become essential financial instruments. With a circulating supply exceeding $200 billion and trillions in annual transaction volume, they now represent core financial assets for both businesses and individuals globally.

Solana's Leadership in Stablecoin Innovation
The Solana blockchain has emerged as a leading platform for stablecoin adoption, doubling its share of the stablecoin market in recent years. Its exceptional transaction speed (up to 65,000 transactions per second), low fees, and innovative Token Extensions make Solana uniquely suited for scalable and efficient financial solutions.

Accelerating Corporate Adoption
Major corporations, including Visa, PayPal, and Citibank, have integrated stablecoin solutions on Solana. Notably, PayPal's extension of its PYUSD stablecoin to the Solana blockchain in mid-2024 resulted in an impressive eightfold increase in its supply within six weeks.

DeFi Expansion and Strategic Collaborations
Solana's DeFi ecosystem has significantly contributed to stablecoin proliferation, boasting $16 billion in Total Value Locked (TVL) and capturing 30% of the total decentralized exchange (DEX) trading volume. Strategic partnerships, including collaboration with Circle (issuer of USDC) and leading fintech companies, continue to drive substantial growth.

Innovative Token Extensions and Permissioned Environments
Solana's groundbreaking 'Token Extensions' provide enterprises with advanced functionality to optimize stablecoin usage while maintaining regulatory compliance. Additionally, 'Permissioned Environments' offer tailored blockchain solutions for businesses aiming to meet stringent regulatory requirements.

"Stablecoins have transitioned from being niche crypto innovations to integral elements of

everyday financial operations," said Patricia Albrecht, Superteam Germany Lead. "Solana's cutting-edge technology is facilitating real-world adoption at unprecedented speed and scale, providing businesses and individuals with payment solutions that are faster, cheaper, and more reliable."
